# Module 9 Lab 2: Migration Note

## Moving My Notebook to JupyterHub

### What I Can Keep

I don't think I need to change all my work. My Python code sh
JupyterHub too. I can save my notebook as an `.ipynb` file ar
My functions and calculations can stay the same.

### What I Need to Do Again

I need to log in to JupyterHub and upload my notebook. I also
CSV files if I use them. Some Python packages may need to be
After that, I need to run my code and check the results.

### What Could Go Wrong

I remember working with a CSV file in one of our labs. If I f
that file, my code will not find it. This could be a problem
another platform.

### My Experience

At the beginning of the course, I worked with Jupyter Noteboo
used Terminal to open it. Later, I tried Google Colab. In one
with penguins data and uploaded a CSV file.

In Module 9 Lab 1, I made a function to change pounds into ki
opened Colab, wrote my code, and ran it. I liked that I didn
Python again.

I would check my files first if I moved my work to JupyterHub
the notebook to see if everything still works.

Moving My Notebook to JupyterHub

What I Can Keep

I don't think I need to change all my work. My Python code should work in JupyterHub too. I can save my notebook as an `.ipynb` file and open it there. My functions and calculations can stay the same.

What I Need to Do Again

I need to log in to JupyterHub and upload my notebook. I also need to move my CSV files if I use them. Some Python packages may need to be installed again. After that, I need to run my code and check the results.

What Could Go Wrong

I remember working with a CSV file in one of our labs. If I forget to upload that file, my code will not find it. This could be a problem when moving to another platform.

My Experience

At the beginning of the course, I worked with Jupyter Notebook on my Mac. I used Terminal to open it. Later, I tried Google Colab. In one lab, I worked with penguins data and uploaded a CSV file.

In Module 9 Lab 1, I made a function to change pounds into kilograms. I just opened Colab, wrote my code, and ran it. I liked that I didn't need to install Python again.

I would check my files first if I moved my work to JupyterHub. Then I would run the notebook to see if everything still works.
